

Gyropalette® Simple Cage

► *Quality that stands the test of time!*

STABLE ~ STURDY ~ COMPACT ~ RELIABLE ~ EXTENDABLE

Leader in automatic riddling for more than 35 years.
A complete range of machines and cases for storage and riddling.
More than 15 000 Gyropalettes® currently in use.

What makes the difference

- **STURDINESS**
- **COMPACT** : the frame do not project beyond the case in rotation and its V shape allows placing it in narrow cellar. Thanks to its system of slope, in position of loading, the cage is placed at the backs what facilitates the handling operations.
- **RELIABILITY** : hot galvanization, high quality mechanical and electrical components, resistance to cellar humidity, little maintenance required.
- **EASY TO USE**
- **VERSATILITY** : can riddle metal 504 cases with forklift holes or T.S.R.[®] containers handled by hooks.
- **LOW ENERGY CONSUMPTION** : thanks to the high mechanical efficiency of the rotation and tilting movements : 2 motors of 0.37 kW.

2 types of automaton

- **SINGLE** : 2 integrated riddling programs: in 5 and 7 days.
Only one machine controlled.
- **EXTENDABLE** : drives single cages up to a total series of 8, 12 or 20 machines, depending on the configuration :
 - entirely programmable, user-friendly.
 - memory capacity of 9 different riddling programs.
 - complete display of operations: movements and time count.
 - easy to connect up, at a later date, to the automaton of other Simple cage in extension.

High quality riddling

The stability of the chassis, a program with low amplitudes of rotation and tilting ensures regular, high-quality riddling while allowing riddling cycles in 7 days.

25 to 37 000 bottles per year are riddled by a Gyropalette[®] Simple Cage.
